Observation of Student Teacher (Form 1)

Student	Haaris Jamil	Date	21st October, 2026
Class / Year level	Year 10	Subject	Science

Pre-Observation Discussion

Student teacher completes the first column and discusses prior to lesson observation.

Pre-Observation		Evidence from Observation
What exactly do you want observed and why? What do you want the observer to notice?	My classroom management, including clear expectations, instructions, transitions and responses to off-task behaviour. Please notice how I maintain a respectful, focused environment and support participation during group work.	Lesson delivered with stated learning objectives through digital presentation, whiteboard notes and verbal instruction. Students engaged in all activities with teacher showing both expertise and passion for the topic.
What outcomes are you expecting?	Students understand expectations, stay engaged and work cooperatively. I would like feedback on how consistently and calmly I manage the class while maintaining positive relationships.	Teacher moved consistently during the lesson to individual groups, explaining and asking questions, promoting curiosity and allowing for differentiated outcomes of depth of learning.

Post-Observation Discussion

Notes can be added through the lesson by the observer and expanded on during the discussion.

Students

● What are the intended learning outcomes for this lesson or unit of work? ● What information do you have about how students achieved the intended learning outcomes? ● What are their remaining misunderstandings? / What are the next steps in learning?

Teaching

Review pre-observation criteria	Provided in advance
Student teacher reflection of the observation focus	The lesson went well, with students asking plenty of questions. They also asked me to present my pepeha in Hindi, which I did. The test ran about five minutes over, leaving the circuit activity rushed. We completed the lesson, but I changed the written exit ticket to oral responses. Students appeared to understand; next time, I will allow more time for questions, retain an individual check and provide additional circuit challenges.
Observer's key pieces of evidence of what was noticed	Key evidence - student engagement. Both the 'previous lesson content quiz (charges) and practical

	circuit building were well received with students wanting to demonstrate their knowledge of the previous lesson and the curiosity, challenge and delight (?) in being able to correctly build circuits.
Areas of strength	Teacher's in-depth knowledge of subject and the teachers professionalism.The student teacher was intentional and focussed with clear goals taught with direction and clarity.
Agreed goal for next steps	Provide additional circuit diagrams for students to create opportunities forthe more advanced/students with prior electrical circuit knowledge to build

Student Teacher Evaluation

Student evaluation of lesson taught and observation discussion	My mentor teacher's feedback was encouraging, particularly on clear instructions and support during group work. I need to balance students' questions with sufficient practical time and provide extension activities for students with prior knowledge. I will also retain a brief individual check to assess understanding more reliably.
