Observation of Student Teacher (Form 1)

Student	Haaris Jamil	Date	15th October, 2026
Class / Year level	Year 10	Subject	Science

Pre-Observation Discussion

Student teacher completes the first column and discusses prior to lesson observation.

Pre-Observation		Evidence from Observation
What exactly do you want observed and why? What do you want the observer to notice?	My use of pepeha and whakataukī to build relationships and affirm te reo Māori, supporting my commitment to Te Tiriti o Waitangi. Please notice pronunciation, meaningful use and student engagement.	Haaris' pepha and ewhakatauki were well received. The students were fully engaged and curious about the content.
What outcomes are you expecting?	Stronger connections with students, visible respect for Māori language and identity, and feedback to improve my culturally responsive practice.	Taking time to deliver the pepeha demonstrated our school value of whanungatanga and built upon previous activities, creating positive, meaningful relationships with the students.

Post-Observation Discussion

Notes can be added through the lesson by the observer and expanded on during the discussion.

Students

● What are the intended learning outcomes for this lesson or unit of work? ● What information do you have about how students achieved the intended learning outcomes? ● What are their remaining misunderstandings? / What are the next steps in learning?

Teaching

Review pre-observation criteria	Set and discussed well in advance of lesson tying into our school curriculum.
Student teacher reflection of the observation focus	I felt the lesson went well. The pepeha helped me connect with students, and the models and demonstrations kept them engaged and thinking. The sequence was coherent, but I left insufficient time for the worksheet. Next time, I will protect time for an independent check and use labelled visual aids to make the particle modelling clearer.
Observer's key pieces of evidence of what was noticed	Observation and video recording of the lesson showed student engagement.

Areas of strength	‘Purposefulness’ of teaching lesson content. Posing differentiated questions encouraging students to gain a deeper understanding of charges and laws of attraction/repulsion.
Agreed goal for next steps	Further advancing ‘student modelling’ of protons, electrons etc using visual aids (e.g. hats stating subatomic particles and charge).

Student Teacher Evaluation

Student evaluation of lesson taught and observation discussion	Lee’s feedback confirmed that the pepeha helped build relationships and that my questioning encouraged students to think. His suggestion to use labelled hats would make the particle model clearer. I will develop this while allowing more time to check individual understanding.
