Observation of Student Teacher (Form 1)

Student	Haaris Jamil	Date	6th November, 2026
Class / Year level	Year 10	Subject	Science

Pre-Observation Discussion

Student teacher completes the first column and discusses prior to lesson observation.

Pre-Observation		Evidence from Observation
What exactly do you want observed and why? What do you want the observer to notice?	How effectively I differentiate support and challenge during practical work, as students vary in understanding and confidence. Please notice how I use prompts, diagrams and questioning to support participation and independence.	Haaris provided a detailed introduction to the lesson, which included a digital presentation, setting the lesson expectations and learning objectives. This was followed by a demonstration how to build the circuit. An additional circuit task was provided for the more able students to move on to. Haaris circulated the class throughout the practical time, assisting students.
What outcomes are you expecting?	Students participate meaningfully and progress with an appropriate level of support. Those who are ready for further challenge extend their understanding, while those needing guidance become more independent.	Haaris has gained the class's interest by relating the topics to his own professional experiences and by challenging the students to provided explanations of practical results. All students had the opportunity for success be it being to build a simple series circuit or completing extension tasks working towards parallel circuits.

Post-Observation Discussion

Notes can be added through the lesson by the observer and expanded on during the discussion.

Students

- What are the intended learning outcomes for this lesson or unit of work?
- What information do you have about how students achieved the intended learning outcomes?
- What are their remaining misunderstandings? / What are the next steps in learning?

Teaching

Observer's key pieces of evidence of what was	Class engagement, gained throughout stimulating

noticed	scientific thought.
Areas of strength	Professional knowledge and sharing experience within the field, ability to relate lesson objectives to real situations.
Agreed goal for next steps	Further opportunities to reinforce how the learning objectives relate to students' lives.

Student Teacher Evaluation

Student evaluation of lesson taught and observation discussion
